

[CAMO.aero] PLATINUM

The platinum package is the ultimate solution for the continuing airworthiness management of an aircraft that must comply with EASA Part-M Subpart G requirements. In addition to the GOLD package services, PLATINUM clients have access to our AOG Support Line and online aviation library [FLYbrary.aero].

[CAMO.aero] GOLD

The advanced package for aircraft that must comply with EASA Part-M Subpart G requirements. It includes additional services such as Forecasting, Reporting, Manual Hosting, Maintenance Budgeting and Invoice Reviews.

[CAMO.aero] SILVER

The basic package for aircraft that must comply with EASA Part-M Subpart G requirements.

[CAMO.aero] Light

For small aircraft that are only privately operated and do not require the controlled environment as per EASA Part-M Subpart G.

Additionally, there is a hosted version offered to Commercial Operators which do have their own CAMO but want to outsource (subcontract) some of their Continuing Airworthiness Management Functions.

As the first independent Swiss EASA approved Continuing Airworthiness Management Organization (CAMO), we can provide much more than the legally required controlled environment for your aircraft.

[CAMO.aero] is available as hosted platform to commercial operators as well as for different service levels to private operators and asset management organizations. It fully complies with the EASA requirements for a Continuing Airworthiness Record System.

The platform allows document sharing, version control and access to a variety of add-ons such as manuals and event planning board.

Recording, analyzing and reviewing data are the key functions of this platform, where continuing airworthiness managers get an easy to use control panel for the oversight of their fleet.

The system can be accessed around the clock from every PC with internet connection. This allows tracking items from almost every location and accessing history whenever something out of the ordinary happens.

Automated email notification of changes to data you want to know about is an integrated function as well as the possibility to import from and export to data from all common MS Office applications.

Aside the compulsory documents of a fleet, many other functions are available such as a technical briefing board, hours' and cycles' recording (journey log), forecasting of a maintenance budget and potential flight-hours, the tracking of hold items and other status information including airworthiness directives, service bulletins and modification data.

CAMO.aero is the ideal add-on to your maintenance planning system (e.g. CAMP, CMP or Cescom) keeping your continuing airworthiness records in a well structured and organized format.

The platform fulfills all data requirements a continuing airworthiness management organization must fulfill in order to comply with the actual EASA Part-M Subpart G airworthiness code.
