A photograph of several black dominoes scattered on a light-colored surface. Some are standing upright, while others are lying flat. The lighting is dramatic, with strong highlights and deep shadows.

Quality & Audit Management Program

Quality and Audit Management can be done in many ways. As external auditors and consultants for quality assurance, we support your organization with state of the art quality assurance and/or audit programs based on EASA and ISO standards.

Building an airplane and flying around the world at the speed of sound is easy. There is a technical solution to almost everything. The biggest factor in errors in aviation today are human beings. This is well understood and put into action in our Quality Assurance and Audit Management Program. Both our programs are based on the following three steps:

1. Ensuring a safe operation by understanding the processes and how people live them.
2. Documenting these processes in a way people understand them. This can be graphical, in text format or a combination of both.
3. Enabling the individual to use these processes with a continuous process management program.

It is a well known fact, that especially smaller organizations in today's environment often suffer from the increased load of paperwork and complex regulations they are faced with.

We prepare a tailor-made quality assurance solution for your operation, by analyzing size, number of employees and range of services provided to customers.

While conducting audits on-site we analyze the effectiveness of the quality management program and make recommendations to you for further improvements and/or changes to established procedures.

At the same time we notify you about and support you with the incorporation of regulatory changes and ensure you are in compliance with them.

We support you with experience and resources, such as auditors and post-holders, as well as computer based solutions in order to keep your quality assurance proactive instead of reactive.
